## Tour of Joinery

Take a tour of our factory

Our experienced and skillful joiners enable the company to provide customers with an exceptionally high standard of bespoke joinery items, from one-off shop counters or desks, through to comprehensive and hard-working POS units for example.

We source timber from only registered environmentally-friendly sources across the world - we will only purchase timber from suppliers using sustained forests - and our supply chain gives us access to an incredible 50 different types of wood to match customer expectations of colour and finish. Not only can we manufacture in solid and real wood, we can also use veneer or laminate and to incorporate glass, metalwork, solid surfacing, individually or in any combination, by drawing on the manufacturing resource across Savekers Ltd. Our portfolio and capabilities within the remit of standard range items was boosted when Savekers acquired Table Trading Company (TTC) in 2004. Since this time we have produced a selection of POS items for the homewares sector, in which TTC had an established track record, in particular for The Meyer Group.

Most orders will come into us via email or the phone. At this point we will immediately establish how customers wish the design to be created - either from their own, sometimes very rough, drawing or from technical drawings. Whichever route, our CAD design team will create drawings from which we will generate a cost estimate. So we will discuss with the customer any specific requirements for the wood to be used as well as give them access to our experience and, where necessary, propose alternative materials that may be more suitable for the items expected use, or be a more cost effective use of available budget.

Once this initial phase is concluded and customers are completely happy with the specified materials, drawings, cost and time estimates, the job is entered onto our production schedule. This marks the ordering of materials whether it be solid timber, sheet material and accessories and our highly experienced machinists will review the technical drawings and designs to generate a comprehensive cutting list.

The wood shop, assembly and finishing facility and production area include:

- Rip saw
- Band saw
- Mitre saws
- Under & over planer, thickener and mortiser
- Spindle moulder
- CNC lathe machine
- Pin head router
- Morticer
- Pillar drills
- Edge bander \*

\* Ideal for edging any profile of board in high impact edging for which we can source almost every colour.

The CNC machine can create shapes such as curves, rounds and ovals. This can accommodate a single size of timber or board up to 2440mm x 1220 mm (8 foot x 4 foot) in size. We can also create and produce any type of profile in timber, whether for skirting boards, architraves or doorframes for example, we can match existing mouldings too, so that renovation or refurbishment of old buildings can be handled to be sympathetic to original wooden features and items.

Once all the components on the cutting list have been produced including profiling timbers and edgbanding boards, they are then passed through to our bench hands for assembly and construction.

There are no restrictions on the type or size of items manufactured and supplied. Assembly will be in line with the on-site location – that is, if considered essential, then our sales representatives will visit the site prior to the item/s being manufactured. At this point, we will take an experienced view on whether the item should be despatched 'complete' or whether, due its size and weight, it should be manufactured in 'sections'. If this is the case, then upon delivery it will be completely assembled on-site by one of our trained fitting and installation engineers.

Sav Joinery will also manufacture prototypes as required for customers, to ensure that the finished item matches expectations both from an aesthetic and performance perspective.
