

manufacturing

profile cutting

We are delighted to announce the arrival of a Tru Laser Tube 5000 from Trumpf at our Birmingham based production facilities.

With the addition of our new profile laser cutter, we utilise latest CNC laser cutting technology to provide the best possible service – improving on traditional manufacturing techniques as well as offering customers a sub contract cutting service.

Savekers are developing the production of existing standard components as well as designing and developing items to maximise efficiency.

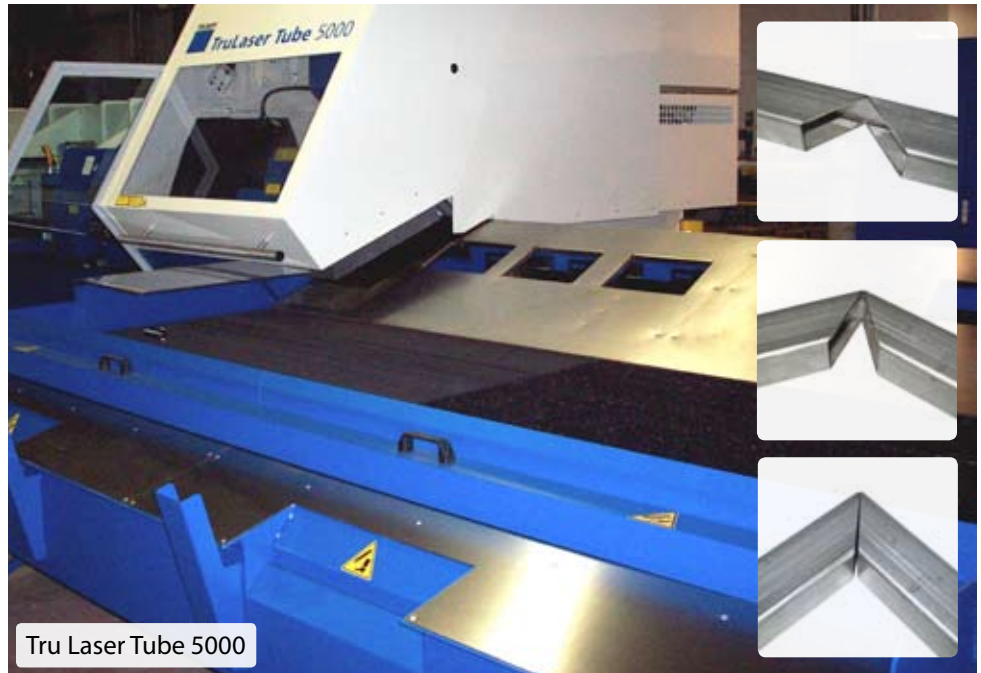

With a laser beam, almost any profile is possible regardless of its complexity. Whether customers are looking for frames to fold and weld, wall bars with unique slots, high volume precision cutting – we can provide the solution.

Leaving clean cut metal with contours the amount of processing required is greatly reduced. One piece can have a variety of cuts in various positions without additional set up costs.

To learn more about the possibilities, arrange to see the machine in operation or request a quotation, please contact our Sales team.

technical capabilities

Max wall thickness	6mm
Max outer circle diameter	150mm
Max tube length	6.5m
Max finished parts length	3.5m

products & solutions

Savekers holds a unique position in UK metalwork and joinery manufacturing. We handle and undertake every stage of production and finishing. Whilst our range of standard metalwork items extends to over 700, we are constantly evolving our bespoke design and manufacture service for customers as part of our overall strategy to provide total solutions to our customers' needs.

- Waterjet Cutting & CNC Machining
- NC Bending & Mandrel Bending
- Ring Rolling
- Mig & Tig Welding
- Gas Brazing & Gas Silver Solder
- Mirror & Satin Polishing
- Chrome Electroplating
- Aluminium Etching and Anodising
- Automatic and Semi Auto Saw Cutting
- Milling, Drilling & Tapping
- Pressing & Flow Drilling
- Bench Work
- Fabrication
- Edge Banding
- CNC Lathe
- Multi Bore Drill
- Assembly
