Solutions for Architects and Designers

Perfect partner for architects and interior designers

With a reputation for quality, unrivalled production and service, Savekers is the perfect partner for architects and interior designers seeking a manufacturer that understands the idiosyncrasies of a retail design solution.

Savekers provides dedicated design and high quality manufacturing of standard and bespoke metalwork products in a range of materials for one-off and bespoke designs, and a standard product portfolio, regarded as the most comprehensive in the UK. Our resource includes in-house CAD technical design and a 45,000 square foot production facility with water jet cutting, CNC machining and chrome plating.

We have a joinery factory that specialises in the design and manufacture of high quality bespoke woodworking solutions. Our team of skilled craftsmen is experienced in producing functional crafted designs, working with all types of wood to incorporate glass, metalwork or solid surfacing.

With our design and production resource held entirely in-house, we offer architects and designers ultimate levels of control over product, material and finish selection. Prototypes represent an important aspect of the design process, and our CAD teams will work with you to deliver samples.

A match made in Heaven

Savekers worked with 'Heaven' beauty and skincare, to create a high quality, bespoke stylish and quality suite of furniture for the Heaven flagship concession at London's Nutri Centre. From a 'limited brief' the Savekers team designed, produced and installed a stylish, contemporary and functional suite of timber furniture. Shopfitters installed all items, including several glass-fronted wall and floor mounted units, glass top units, counter, sample station and consultation table.

Hand-in-hand with Indian couture

The first retail outlet in the UK to secure approval to sell high-end couture garments designed and produced by New Delhi's top designers, turned to Savekers, to achieve a chic interior design scheme that reflected the class and style of its designer wear. Ethina opened its doors for business just seven weeks after contacting to Savekers, which designed, manufactured and installed a retail solution including a unique curved wooden counter, and a range of garment and accessory display items including shelving, hanging rails, glass and metal tables.
