Solutions for Builders & Contractors

Experienced team of technical designers

Precision, quality and deadlines are amongst the most critical - and minimal - requirements of a supplier to the building and construction industry and related sectors, and Savekers has a proven track record of achieving these criteria, in particular across one-off or multiple site contracts.

Through communication, understanding and appreciation, our team of technical designers are experienced in working in partnership with builders and contractors to provide a solution and a product to match. From technical drawings, detailing material sizes, specification and finishes, through to templates and prototypes, technical manuals and installation guidance, our bespoke design and manufacture of high quality metalwork and joinery products is second-to-none. And with a standard product range regarded as the most comprehensive in the UK, it is possible to select from hundreds of products across clearly defined product groups including handrails, balustrades and entry systems - if necessary we can create a solution that tailors these standard products to suit a specific application or contract.

Our in-house resource includes not only CAD technical design, but also a 45,000 square foot metalwork production facility with water jet cutting, CNC machining and chrome plating, and a dedicated woodshop resourced with our teams of skilled craftsmen. With all design, manufacturing and finishing handled on site, we know exactly the stage of production of each and every order. In this way we provide ultimate and unrivalled levels of control over product, material and finish selection, production and of course delivery and installation.

Project Management

In addition to our manufacturing abilities, Savekers can also deliver a turn key solution to all interior fitting installations through a coordinated project management service. From electrical system design, cost management, and facilities management, to IT solutions, shopfitting, project and installation management, we can provide on-site support, before, during and after installation.

Standard metalwork range includes

- Counter & Cabinet Fittings and shelving systems
- Food Servery - systems ideal for the hospitality and leisure sectors.
- Balustrades & Handrails - with adjustable fittings for simple specification and assembly, all balustrades are available in a selection of finishes.
