Solutions for Car Showrooms

Consistent, corporate and stylish design & finish

A dealership's car showroom has to work extremely hard to draw in its potential customers as well as have the capacity and scope to display cars in the most favourable light, in a consistent, corporate and stylish design and finish. There seem few manufacturers that can design, produce and install the fittings and furniture for this environment, but Savekers is indeed such a business.

Savekers is in the enviable position of having its own CAD technical design team, a 45,000 square foot metalwork production facility - that includes water jet cutting, CNC machining and chrome plating – a fully equipped woodshop operated by highly skilled craftsmen, and a team of experienced on-site installation, maintenance and facilities/project management teams.

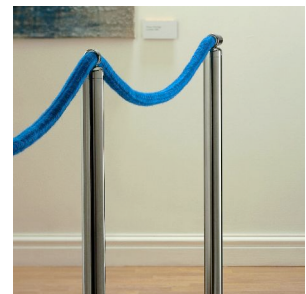

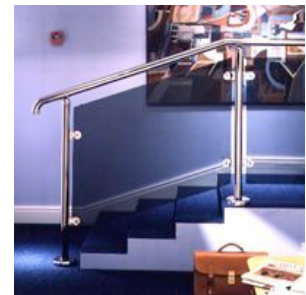

With this resource, Savekers works with interior designers, brand managers, architects and contractors, to undertake projects for car showrooms and display/POS schemes. Our solutions include standard product from an extensive range of metalwork and joinery items, or indeed modifications to an existing product to suit.

Some of our standard products that are suitable for application within car dealerships and showrooms include privacy screens, pedestrian guidance systems, POS/POD units, counters and desks, as well as door handles and an extensive disability range to assist in compliance with the DDA.

Top gear a winner with MGR

Savekers supplied a selection of 'top gear' from its market-leading metalwork range for a series of vehicle display areas run by the MG Rover Group at Welcome Break Motorway Service Stations.

To ensure that displays of cars were secure and segregated from busy public areas, walkways and thoroughfares, Savekers chrome barrier rope post system, with blue rope, was used.
