## Solutions for financial institutions

Protection screens, privacy screens, queuing systems & POS units

Through working directly with design and brand managers at banks and building societies, as well as collaborations with architects, designers and contractors commissioned to undertake projects for financial institutions, The Savekers delivers solutions to unique interior design schemes, supplies standard product from its extensive range of metalwork and joinery items, can indeed modify an existing product to suit. All this backed up by our on-site installation teams and facilities/project management experts.

Our resource includes an in-house CAD technical design team and a 45,000 square foot product facility that includes water jet cutting, CNC machining and chrome plating. This is further complemented by workshop that can produce functional beautifully crafted designs across a range of uses and applications within a bank or building society. Our team of skilled craftsmen is experienced in working with all types of wood – real woods, veneers, laminates and panels – to incorporate glass, metalwork or solid surfacing. All wood is sourced from sustained forests, registered as environmentally-friendly sources.

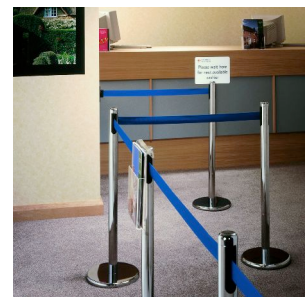

Standard products suitable for application within financial institutions including protection screens, privacy screens, queuing systems, POS/POD units counters and desks as well as door handles and an extensive disability range to assist in compliance with the DDA.

### Sound barriers

Savekers manufactured a range of partitions, barriers and pedestrian guidance systems for Nationwide Building Society, as part of its ongoing branch refurbishment programme designed to enhance in-branch customer guidance.

The project required consultation with the Nationwide Property Services Design team to ensure that the solutions specified, designed, manufactured and supplied by Savekers provided sufficient levels of flexibility so that all items could be re-sited within the branch following a refit.

Savekers supplied a system of posts for use with handrails of four different heights from 900mm to 1500mm, to include options for application as a partition screen incorporating hinging and compatibility with glass panels. In addition, the company designed and manufactured a new system incorporating 4 x pillars of 1500mm high, manufactured from chrome steel with satin finish, to be compatible with 10mm partition safety glass.
